

JONATHON PLUMB

AI Solutions Engineer

Detroit, MI | jon.plumb89@outlook.com | [LinkedIn](#) | [GitHub](#) | jonplumb.dev

SUMMARY

AI Solutions Engineer who has built software with LLMs since the GPT-3 era — roughly five years — and ships production generative-AI and agentic systems end to end, from LLM application architecture to self-hosted multi-agent infrastructure. Four-plus years of customer-facing technical implementation experience delivering custom software into enterprise environments, now focused on turning AI capability into working products. Founder of two live AI SaaS products and a self-hosted multi-agent platform; University of Michigan Applied Generative AI Specialization.

AI PROJECTS

Particalmist LLC — Founder & Solo Engineer

2025 – Present

Michigan LLC · independent AI product studio

- **Nitruz** (live, nitruz.com) — Built and shipped a production SaaS that uses generative-AI image models to turn raw auto-dealership vehicle photos into studio-quality marketing assets, owning the full stack from frontend to billing.
- Engineered a credit-based billing system with cost reconciliation, a submission-lifecycle pipeline, and a mobile before/after comparison UX.
- **ResumeAye** (live) — Built a freemium AI SaaS that tailors resumes to job descriptions using the Gemini API, with an ATS-compliance match-score engine and template-based .docx generation.
- Stack: React 18 / TypeScript / Vite / Tailwind, Firebase Auth + Firestore secured with rule-tested access policies (22 passing emulator tests), and docxtemplater; freemium model with a \$12/mo Pro tier.
- **Hermes — self-hosted multi-agent system** — Architected and deployed a containerized multi-agent platform that routes LLM calls across local (Ollama) and cloud models with tool-calling and Model-Context-Protocol (MCP) integrations.
- Runs on a self-managed, hardened Ubuntu homelab — Docker with GPU-in-container inference, Tailscale mesh networking, Caddy reverse proxy, and automated 3-2-1 backups — with model-fallback chains, context management, and monitoring built for autonomous agent loops.

EXPERIENCE

Implementation Engineer — Verint

Oct 2021 – Present

Remote · Voice-of-Customer / digital experience platform

- Design and deliver custom Voice-of-Customer and digital-feedback implementations for **60+ enterprise clients** using the Verint WebSDK — configuring sampling triggers, DOM-based data collection, conditional logic, and behavioral signals such as rage-click and struggle detection.
- Serve as the technical owner of client deployments, partnering directly with customers to scope requirements and ensure successful integration and adoption — the same customer-facing technical-delivery work at the core of AI solutions roles.
- Diagnosed and resolved **100+ complex third-party integration issues**, improving implementation reliability by ~35%.
- Collaborate cross-functionally to design adaptable solutions against diverse business requirements, identifying workflow gaps and optimizing for performance.

Teaching Assistant & Tutor — Grand Circus

Apr 2023 – Present

Detroit · front-end web development bootcamp

- Teach full-stack JavaScript (HTML/CSS, JavaScript, React, Node.js) to bootcamp cohorts and deliver 1:1 tutoring on core concepts and engineering best practices.
- Supported **50+ students to a 95% pass rate** on rigorous full-stack assessments.

TECHNICAL SKILLS

AI & LLM Engineering: LLM application development, agentic systems & multi-agent orchestration, Model Context Protocol (MCP) & tool calling, Claude Code & agentic coding, Anthropic Agent SDK, RAG, prompt engineering & context management, local inference (Ollama, quantized models), generative image systems, AI governance; Gemini API, Anthropic / Claude API

Languages: TypeScript, JavaScript, Python, C#, SQL, Bash

Frontend: React, Angular, Vite, Tailwind CSS, Streamlit, Gradio, Chrome extensions, HTML/CSS

Backend & Data: Node.js, Express, RESTful APIs, Firebase / Firestore (security rules), Stripe, MongoDB, Supabase / PostgreSQL; Python data stack (pandas, NumPy), data-pipeline development

Testing: Vitest, Firebase Emulator Suite, unit & integration testing

Cloud & Infrastructure: Docker & Docker Compose, Google Cloud Platform (Firebase), Backblaze B2 (S3-compatible), Linux server administration & hardening (Ubuntu Server), Tailscale, Caddy, systemd, NVIDIA / CUDA GPU compute, WSL2, Git / GitHub, n8n

Enterprise Platforms: Verint WebSDK — Voice-of-Customer / digital-feedback implementation

CERTIFICATIONS

University of Michigan — Applied Generative AI Specialization (Michigan Engineering Professional Education), 2026

Coursework: AI Literacy · Generative AI Models & Architecture · Building LLM Applications · Agentic AI Frameworks with Model Context & Tooling Protocols · Image Generation · Generative AI Governance

EDUCATION

- **Grand Circus** — Front-End Development Program (HTML, CSS, JavaScript, TypeScript, Angular, SQL), 2018–2019
- **Grand Circus** — Back-End Development Program (C#, OOP, .NET Core, ASP.NET, MVC), 2021
